

VRE

Calculating Rates

The VRE infection rate is calculated as a rate per 1,000 patient days. The “total patient days” represents the sum of the number of days during which services were provided to all inpatients during the given time period.

The rate is calculated as follows:

$$\frac{\text{Number of new hospital-acquired cases of VRE in our facility}}{\text{Total number of patient days (for one month)}} \times 1000$$

Indicator: Vancomycin-resistant Enterococci (VRE) - Reported Monthly					
Year	Description	April to June	July to September	October to December	January to March
2021-2022	Number of new cases	0	0	0	
	VRE rate	0.00	0.00	0.00	
2020-2021	Number of new cases	0	0	0	0
	VRE rate	0.00	0.00	0.00	0.00
2019-2020	Number of new cases	0	0	0	0
	VRE rate	0.00	0.00	0.00	0.00
2018-2019	Number of new cases	0	0	0	0
	VRE rate	0.00	0.00	0.00	0.00
2017-2018	Number of new cases	0	0	0	0
	VRE rate	0.00	0.00	0.00	0.00
